#

	Source port	Destination port
(a) Segment sent from Alice to sam	1460	23
(b) Segment sent from Bob to sam	1500	23
(c) Segment sent from sam to Alice	23	1460
(d) Segment sent from sam to Bob	23	1500

(e) The source port number in the segments from Alice to sam ~~is~~ can be the same as that from Bob to sam. Because there is no relationship between port number on different hosts.

(f) If they are the same host, it will not be possible.

Because a port number identifies specifically a process.
